What I do

I turn ambiguous AI capabilities into working products. My strongest fit is where product engineering, applied AI, agent systems, rapid prototyping, and production delivery meet.

Selected evidence

Agentville

LIVE / MULTI-REGION

Production system for delegating and orchestrating work across AI agents on Vertex AI. Owned architecture, product behavior, backend, deployment, and iteration end to end.

HappySonar

DEPLOYED

Full-stack coding agent that generates native Expo applications inside isolated sandboxes. Shipped the product and supporting infrastructure end to end.

himaia

LIVE API

Metered API for character-consistent voice experiences. Implemented persona configuration, model orchestration, metering, and product delivery.

Aura OS

VM-TESTED PROTOTYPE

Generative operating-system prototype that turns user intent into temporary interfaces. Explores agent execution, interface generation, persistence, and system-level interaction.

Leadership and production depth

CURE - Chief Technology & Product Officer: Led a 25-person product and engineering organization in regulated healthcare. Owned mobile, backend, pharmacy operations, delivery integrations, and expansion into France.

Mitte - Engineering Manager: Progressed from Senior iOS Developer into engineering leadership.

Native platforms: Built Juno, a functional native macOS AI coding-assistant prototype; shipped Reps to the App Store; earlier senior iOS roles include Asana Rebel, Babbel, and Tapglue.

Best-fit roles

AI Product Engineer

Applied AI Engineer

Forward-Deployed Engineer

Solutions Architect

Technical Prototyping / DevEx

Hands-on Engineering Lead
